

Candidate contribution

1 | Issue review

rejects vague specs, unsupported claims

2 | Compile-time type checks

rejects API misuse, type errors

3 | Unit tests

rejects evaluation and serialization bugs

4 | Round-trip tests ★ this work

rejects drift between contributor's intent and the artifact

5 | Agentic feature tests ★ this work

rejects usability and semantic errors at the CLI surface

6 | Manual verification

rejects subtle misinterpretations of the original math

Verified library entry
